

FORETHOUGHT: THE WAY TO BUILD

A BETTER MOTORHOME.

If you ask most people what it takes to make a luxury motorhome, chances are they'd focus primarily on features like leather upholstery and impressive sound systems.

C.M. Fore, on the other hand, thinks that engineering is the essence of luxury. It's no surprise to see Foretravel's **U-300 Grand Villa Unihome** powered by a rear-mounted **300hp Detroit Silver 6V92TA DDEC** diesel engine, delivering a stump-pulling 820 ft/lb of torque at a mere 1200 rpm. After all, Foretravel pioneered rear-engine power for luxury motorhomes!

You'll also find this performance-driven engineering in Foretravel's unique Monocoque Chassis. In seeking to create a luxurious motorhome with superior handling, greater stability and unprecedented ride characteristics, Foretravel's Monocoque Chassis has revolutionized motorhome engineering once again.

It's not as though we don't put a lot of emphasis on our elegant interiors; Foretravel has a well-known reputation for quality, craftsmanship and design. What people might find surprising is that motorhomes this elegant are also powerful performers. And even though most people might not think about engineering when they're enjoying the leather upholstery and stereo sound, it's reassuring to know that C.M. Fore did.

Thanks America for making us No. 1!
